

equips Maine communities, landowners, and conservation partners with tools to protect, restore, and connect important habitats and ecosystems in a changing climate.

Habitat Connectivity

Conserved Lands, Undeveloped Habitat Blocks & Habitat Connectors

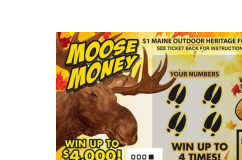

Troy

Focus Areas of Statewide Ecological Significance

The map shows the Troy, New York area. The Douglas Pond and Madiwago Bog are located in the north-central part of the map. The Big Meadow Bog is located in the center. The Unity Wetlands are located in the south-central part of the map. The map includes labels for various towns and villages, as well as the names of the wetlands. A black rectangle highlights the area around Troy, New York.
